

Kranthi K Chinnakotla

10458 157th PL NE Unit 101, Redmond, WA: 98052; **Email:** chinnak.atp@gmail.com; **Phone:** 704-340-1634

Education:

UNCC:

Computer Science: MS

GPA: 3.80

Dec 2016 | Charlotte, NC

Skills:

Java, Kotlin, Android, Swift2.0/3.0, Python 3, SQL, React, Typescript, C#, CPP

Familiar Topics:

Android / iOS native frameworks,
Computer Networks,
Logistic Regression, RESTful APIs,
Data pipelines, Azure services

Activities:

Volunteered at non-profit organization
(Association for India Development),
Generated Funds for NGOs by organizing
Cricket tournaments and musical concerts.

Work Experience:

Microsoft:

May 2024 – Sep 2025 (React JS and Typescript)

- **Developed** features and fixed Po bugs for Computer Use Agent – inside copilot 1p agent called Researcher.
- **Developed** features for copilot 1p agent Researcher.
- **Added** monitors and improved telemetry logging for the Researcher agent , which helped improve overall product health.

May 2024 – Sep 2025 (React JS and Typescript)

- **Built** a lightweight windows taskbar app from scratch, and worked closely with Product managers to take the app from inception to GA (live).
- Parallely **worked** on adding features and fixing bugs in the host app, which is in C++.
- **Implemented** authentication by fetching tokens for various Microsoft internal services.
- **Implemented** engagement and performance telemetry and built dashboards that could drive product management team to make some of the critical decisions.
- Since the app went live , receiving customer in-app feedback, analyzing it and fixing issues and bugs. This windows app has been rolled out to all Microsoft enterprise customers (close to 500K users)

June 2022 – May 2024 (Android Engineer for Outlook)

- **Developed** the feedback feature for Android Outlook search, enabling customer input to be integrated with Microsoft's OCV-wide feedback system. Previously, android outlook search had no feedback option.

- **Built** an Azure CI pipeline for remote Android UI test automation on lab devices.
- **Worked** on adding telemetry to the features and validating score card and instrumentation.
- **Added** minor Query Formulation features for suggestions and search account controls.
- **Conducted** comprehensive A/B testing on all features utilizing internal tools.

June 2020 – June 2022 (Data Engineer)

- **Design** and **develop** data pipelines to analyze customer behavior, enabling the creation of customized Microsoft products and features.
- **Integrate** Microsoft's latest products and services into the data platform, **enabling** Marketing teams to efficiently deliver Welcome and Onboarding emails to customers.
- **Develop** solutions with Azure Data Lake, Storage, Functions, App Services, and Logs.

Android Developer at Hughes Network Systems:

April 2017 – June 2020

- **Architected, developed** and **maintained** Consumer App for Brazil, Colombia, Chile, Ecuador and Peru locales, from start to finish.Reduced crash rate **significantly** using Firebase Crashlytics.
- **Developing** in Java and Kotlin using OOP design patterns including MVP, MVVM models.
- **Integrated** Firebase remote config, performance tools, ML kit, Cloud functions, real-time database and dynamic links into an android app.
- **Implemented** SQLite database using Room dependency.
- **Worked** extensively with network libraries – Volley, Retrofit.
- **Implemented** multi-threading with Kotlin co-routines, Thread pools and Async programming.
- **Implemented** fingerprint login, Facebook and Google social login.
- **Integrated** APIGEE proxies in the native Android application.
- **Integrated** salesforce SDK and worked on Salesforce soups, sync framework and Service SDK (Char configuration).
- Used firebase analytic **events**, to track the usage of the mobile application and provide new features.
- **Assisted** in increasing the user base to around 30K Android users.

Graduate Assistance at UNCC:

May 2016 – December 2016 | Charlotte, NC

- Assisted the students in completing their Android projects.
- Guided the students in understanding the concepts of Android features.

Analyst Programmer at Accenture:

Jan 2007– August 2015|USA|INDIA

- **Worked** on backend API services, posting systems, batch processing.
- **Worked** on **mainframe services** like COBOL, JCL and, that are used to post checking and savings accounts transactions.
